It is a wonderful application that will make you download softwares very quick and without any complication.1. Field of the Invention The present invention relates to an electronic device including a peripheral component, and particularly to a fan control circuit for controlling the rotation speed of a fan included in the electronic device. 2. Description of the Related Art A cooling mechanism (a fan) for cooling electronic devices has been known (for example, refer to Japanese Unexamined Patent Application Publication No. 2005-155619). The electronic devices such as a personal computer are provided with a fan control circuit including an amplifier, a switch, and a fan driving circuit for controlling the rotation speed of the fan. The amplifier amplifies a voltage generated by a coil connected in series with the switch. The amplified voltage is applied to a fan motor, and the rotation speed of the fan motor is controlled in accordance with

the amplified voltage. A fan motor includes a primary coil and a secondary coil. The rotation speed of the fan motor is controlled by switching a DC current flowing through the primary coil in accordance with the amplified voltage. The secondary coil of the fan motor is connected to a fan shaft. By controlling the current flowing through the primary coil in accordance with the amplified voltage, the secondary coil of the fan motor is electromagnetically driven. As a result, the fan is rotated. However, in the above-described fan control circuit, the voltage applied to the fan motor is amplified by the amplifier, and then the amplified voltage is applied to the fan motor. Therefore, the voltage used for controlling the rotation speed of the fan motor becomes the amplified voltage amplified by the amplifier. For example, if the amplifier is operated at a high voltage, the voltage applied to the fan motor is increased. Therefore, if a decrease in the rotation speed of the fan is required, the rotation speed is increased by a level higher than a required rotation speed, so that the fan is caused to operate at a high rotation speed. A decrease in the rotation speed of the fan may be required, for example, for a reduction in the noise generated by the fan or in order to prevent a malfunction caused by an increase in the temperature of the fan. Oh Canada! The new year is nearly upon us.

What better way to usher in a new year than to watch some great hockey 82157476af
